

Make sure name is on homework and turn in to the basket

Solutions to Systems of Linear Equations

One Solution	No Solution	Infinitely Many Solutions
<p>Example: $-2x - 9y = -25$ $-4x - 9y = -23$</p> <p>Graph: </p> <p>Substitute: Solve for $x \rightarrow x=2$ plug in and solve for $y \rightarrow y=4$</p> <p>Eliminate: Cancel out one letter Solve \rightarrow plug back in for other $(4, 2)$</p>	<p>Example: $-3x + 3y = 4$ $-x + y = 3$</p> <p>Graph: <i>Parallel</i> </p> <p>Substitute: $0 = 12$ $12 = 9$ letters go away</p> <p>Eliminate: $0 = 12$ $12 = 9$ letters go away</p>	<p>Example: $2x + 8y = 6$ $-5x - 20y = -15$</p> <p>Graph: <i>Same Line</i> </p> <p>Substitute: $12 = 12$ $9 = 9$ $0 = 0$</p> <p>Eliminate: $2x + 8y = 6$ $=$ $10x + 40y = 30$ $-5x - 20y = -15$ $=$ $-10x - 40y = -30$ $0 = 0$</p>
